

Leksell Gamma Knife® Observation Training

Article No : 1549409

Objective

The trainees will follow the daily work at an Academic Partner site. The training objectives are to obtain knowledge about the practical aspects of stereotactic radiosurgery using Leksell Gamma Knife®, to identify the basic principles and biophysics of Gamma Knife radiosurgery and how they apply to day-to-day patient treatment. Review the clinical indications, parameters of treatment and outcomes of Gamma Knife radiosurgery. Recognize radiation safety issues and principles, as well as become familiar with emergency procedures.

Content

Principles and practice of stereotaxy and radiosurgery
Principles of frame application
Patient selection and teaching cases
Observation of patient treatments
Introduction to and hands-on sessions with Leksell GammaPlan®
Clearance and Emergency procedures
Quality Assurance
